Homework points will be assigned for the quality of mathematics as well as quality of presentation. Important presentation pieces that you should consider are:

- Do not begin a proof with "what-is-to-be-proved", rather you should be in the habit of using a phrase such as "it suffices to show" to indicate to the reader how you are going to proceed in your proof.
- Capitalize the first word of a sentence.
- Avoid beginning a sentence with a mathematical symbol.
- Be careful of sentence structure and punctuation. Take time to reword awkward sentences.
- Be careful of paragraph structure. Be sure to include a line space between paragraphs for ease of reading.
- Check your homework for spelling and grammar.
- You should be continually expanding your L\TeX constructs for symbols and mathematical notation throughout the semester.
- Be sure to include a statement comparable to "This completes the proof." at the end of every proof.
- Make sure that your wording and layout demonstrate your understanding of the material and your ability to produce a textbook ready proof.
